## Introduction

With an ever increasing number of applications demanding more from less, the Unasis split thin section range of bearings aims to bridge the gap providing a highly capable bearing in applications with restricted mass, cost and size.

Applicable to all most all industries imaginable, the table below offers just a snapshot of the some industries where Unasis bearings can be successfully implemented.

If you have an application or design which you think may benefit from a Unasis thin section bearing please contact us.

<b>Medical Equipment</b>	<b>Industrial Machinery</b>	<b>Semi-conductor equipment</b>
X-ray equipment	Rotary polishing equipment	Wafer fabrication manipulators
MRI Body Scanners	Rotary work holding tables	Sputter coating machinery
Surgical saws	Turntables	<b>Converting equipment</b>
Blood analysis equipment	Indexing tables	Wallpaper decorating machines
Surgical manipulators	Machine tools & lathe components	Screen printing equipment
<b>Pharmaceutical equipment</b>	Transmission gear and chain	Textile & Knitting machinery
Packing	Rotary unions & Rotary joints	Tire production equipment
Mixing vessels	Clutch backstops	Wire handling
Rotary Bottle Washing Machines	Gear boxes	Wire winding
Planetary Mixers	<b>Robotics</b>	<b>Sensors</b>
<b>Oil &amp; Gas</b>	Base Bearing	Mounts for Sensors & Equipment
Rotary pipe cutting Equipment	Shoulder, Elbow & Wrist Joints	Instrument mounts
Orbital welding Equipment	Slip Rings	Gimbals & Gimbal assemblies
Orbital Inspection Machinery	Unions and control equipment	<b>Radar equipment</b>
Casing Machinery	<b>Ultra High Vacuum Equipment</b>	Radar drives
Clamping equipment	Rotary Arms	Satellite antennas & Pedestals
Down hole Pumps	Vacuum compatible rotary tables	Truck mounted communication equipment
Blow out protectors	Manipulators	Antenna pedestals
Rotary Clutches	Rotary Shutters	<b>Packaging equipment</b>
Valves	Valves	Labelling machines
Rotary actuators	Rotary Dewar outlet	Bottling equipment
Transmission gear and chain	<b>Cryogenic equipment</b>	Canning carousels
Rotary unions & Rotary joints	Liquid gas submerged pumps	Can decoration equipment
Clutch backstops	Rotary joints	<b>Optical equipment</b>
<b>Renewable Energy &amp; Recycling Equipment</b>	Liquid Oxygen applications	Telescope bases
Wind Turbines	Valves	Camera mounts
Undersea Power Generation Turbines	Turrets	Security camera mounts
Wind Turbine Monitoring Equipment	Gun turrets	Optical drivers
Recycling Machinery	Gun Barrel Mounts	Laser sights
Electric Engine Components	Missile launchers	Optical lenses
<b>Food processing machinery</b>		Airborne camera mounts
Mixers		
Precision cutting machines		
Labelling equipment		

# UNASIS Thin Section Bearings

## Special Features

### High Ball Compliment

Due to the revolutionary split race design, a higher than traditionally possible ball compliment is achievable resulting in the following benefits:

- ⇒ Higher rigidity
- ⇒ Greater dynamic and static load rating
- ⇒ More Durable
- ⇒ Reduced Radial Runout

### Low Mass

The thin nature of the bearing coupled with increased load capacities when compared to a standard thin section bearings mean the mass of an application can be greatly reduced.

### 420C Stainless Standard

All Unasis split thin section bearings come with 420C stainless steel rings as standard.

- ⇒ High corrosion resistance
- ⇒ Reduced maintenance

### Constant Cross Section

Unasis split thin section bearings have a constant cross section enabling solutions to be designed with a low profile despite large shaft bores.

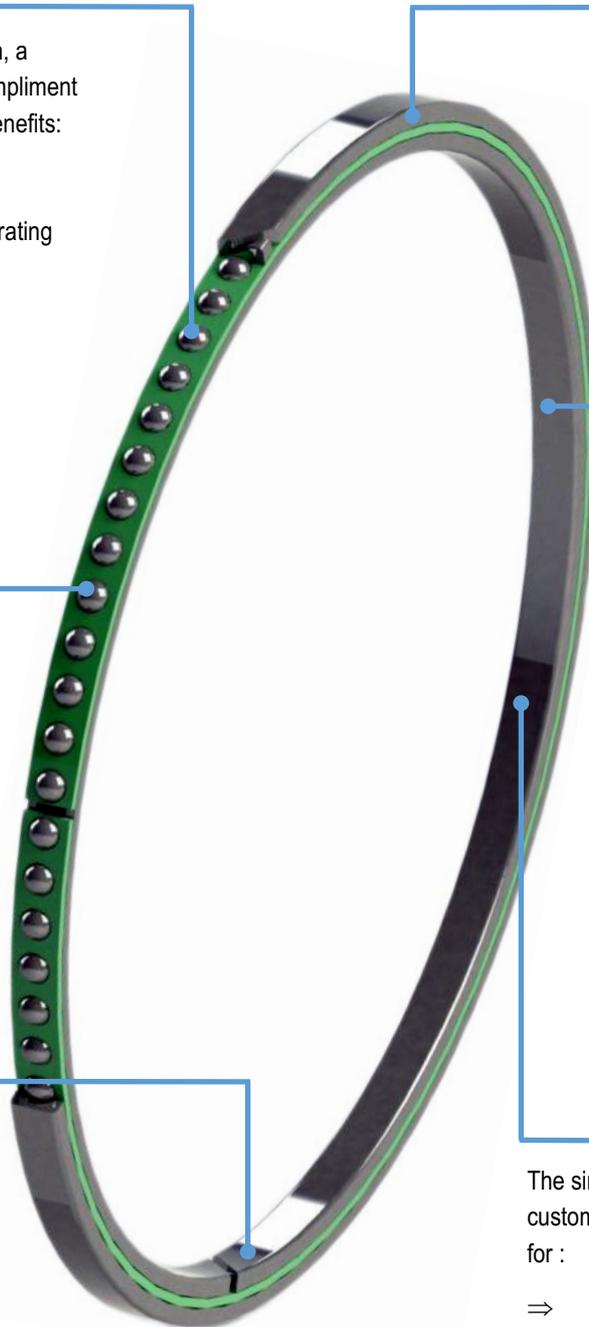

### Split Races

A unique design in the bearing industry allowing application geometry never before possible with all the added benefits over a standard thin section bearing.

### Highly Customisable

The simple design of the bearing offers a highly customisable bearing which includes options for :

- ⇒ Alternative ball type e.g. Ceramic balls
- ⇒ Different cage material options e.g. PEEK
- ⇒ Custom bore dimensions

## Fitting Instructions

Split thin section bearings allow previously impossible assembly geometry's to be used. The unique design of these products allow either inner or outer ring to be seated in a groove on either the housing or the shaft. It is not possible to assemble the bearing if both rings are mounted in a groove, at least one retainer must be used.

To assemble the bearing using the recessed method above you will need to first fit the un-retained bearing ring. For this example we will assume this is the inner ring. There are two potential fitting methods:

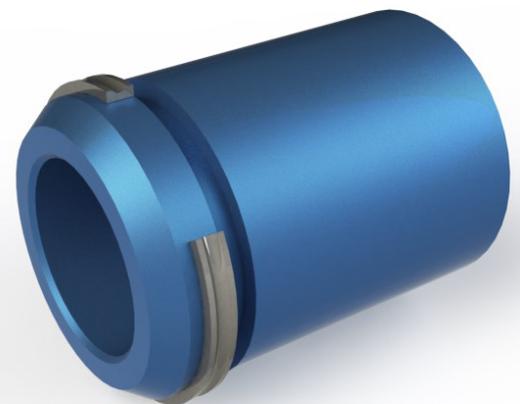

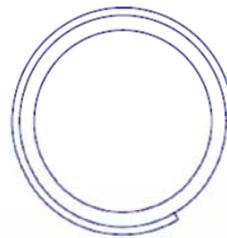

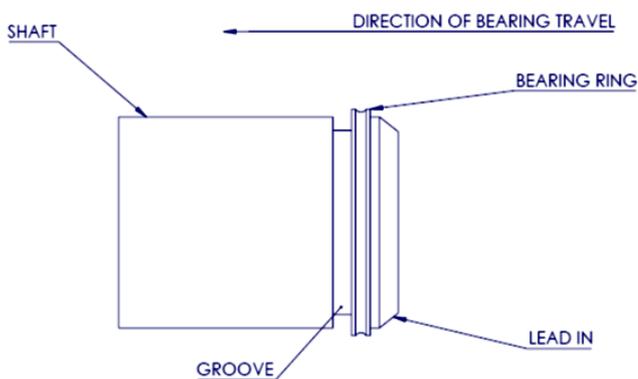

1. The preferred method is one in which the bearing is passed axially along the shaft until correctly located. See the drawing below 'preferred fitting method'.
2. An alternative method is to rotate the bearing onto the shaft well held in a helical form, the ring is manoeuvred into position in a similar manner to threading a nut onto a bolt. This method is only suitable if the bearing groove is sufficiently close to the shaft end. Please contact us for this distance in each application. See the drawing 'acceptable fitting method'.

The bearing split should not be passed radially over the shaft, this can cause permanent damage to the bearing due to excessive stress being exerted on the bearing ring. See the drawing 'unacceptable fitting method'.

Next the cage, balls and outer ring can be fitted before finally locating in the housing, the outer ring then must be retained, please consult us if you are unsure of a suitable retention method.

The required fitting tolerances for both shaft and housing can be provided, typically the shaft and housing fits would be h7 and H7 respectively

## Preferred Fitting Method

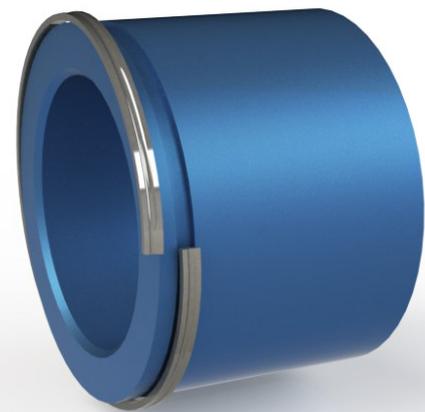

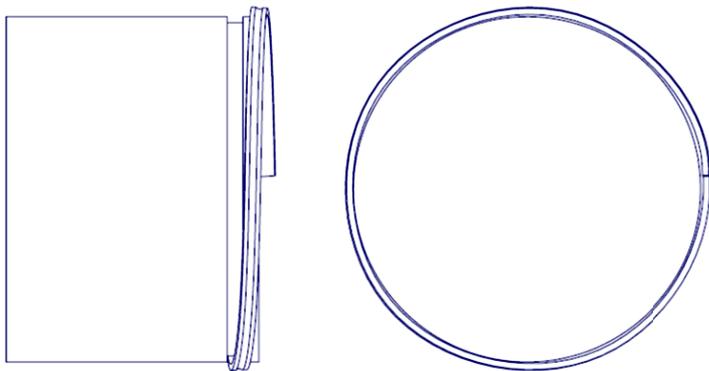

This method of fitting will not cause damage to the bearing.

The shaft should be machined with a suitable lead in to assist in fitting and cause minimal stress to the bearing ring.

# UNASIS Thin Section Bearings

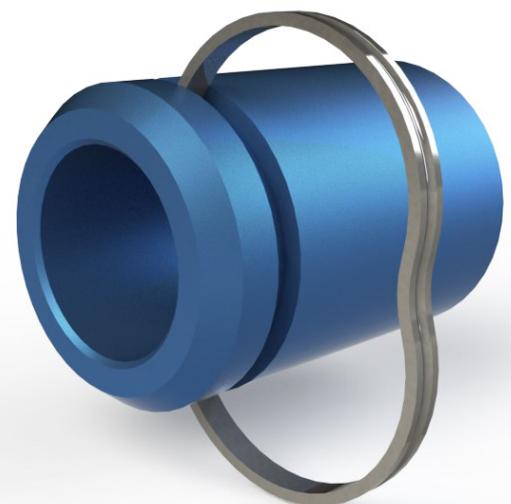

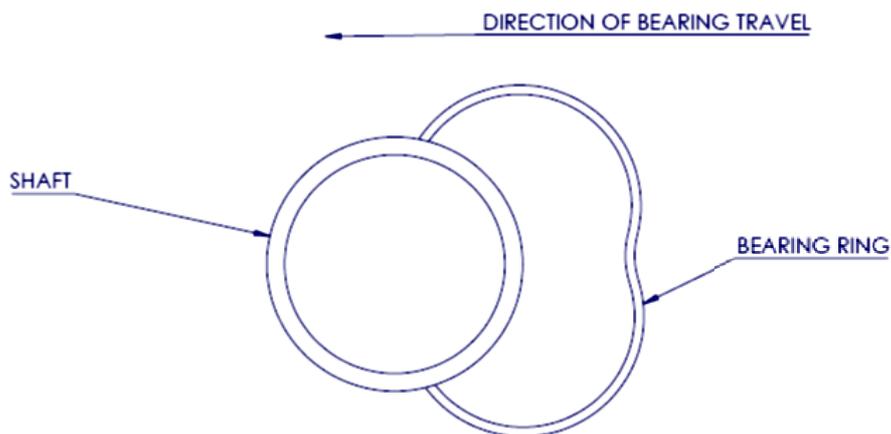

## Acceptable Fitting Method

The bearing ring is rotated onto the shaft in a helical form.

The suitability of this method is dependant of the location of the groove with respect to the end of the shaft and bearing cross section

## Unacceptable Fitting Method

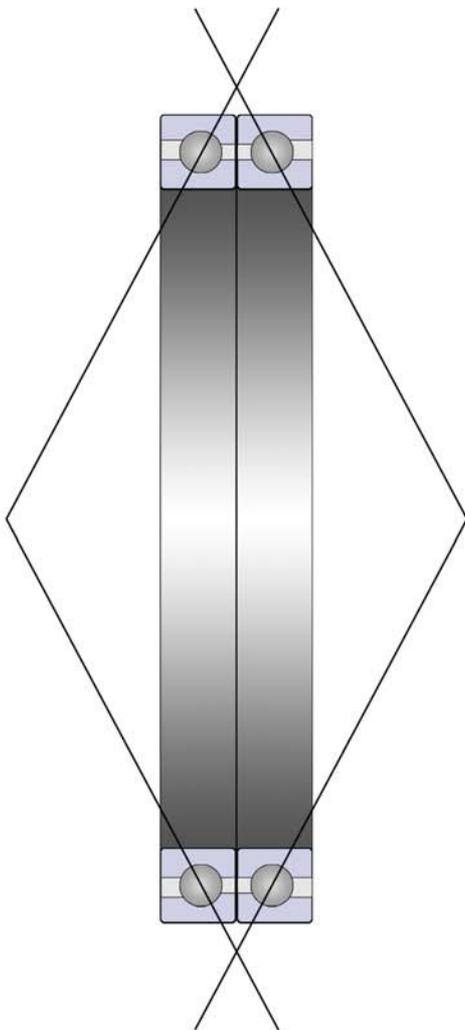

Fitting the bearing in this manner can take the material past its elastic limit leading to permanent deformation of the bearing ring. Bearings WILL become damaged if installed in this manner.

## Angular Contact Configurations

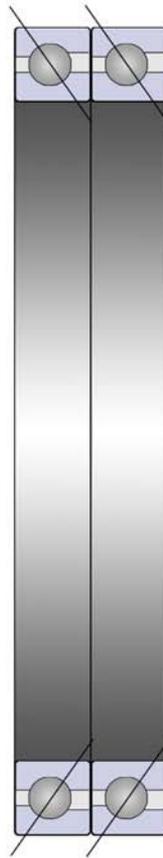

When using angular contact style bearings it is important to ensure the bearings are being mounted in the correct configuration for your application. Mounting orientation and required preload will be dictated by the resultant loads of each application. The below diagram show the simple configurations that will apply to many applications.

For more information on which orientation is best for your application please contact us.

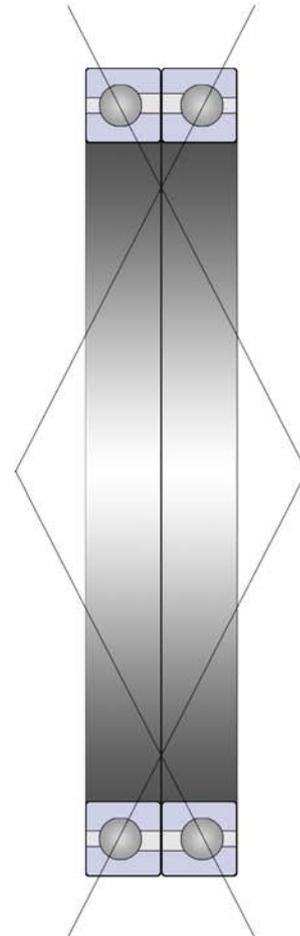

**Back-to-back Configuration**

**Tandem Configuration**

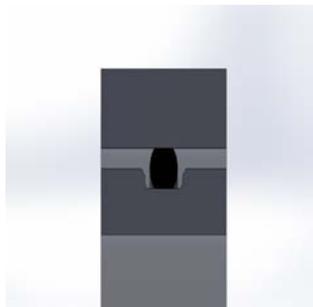

**Face-to-face Configuration**

# UNASIS Thin Section Bearings

## Sealing options

### STATIC SEAL TYPE (R)

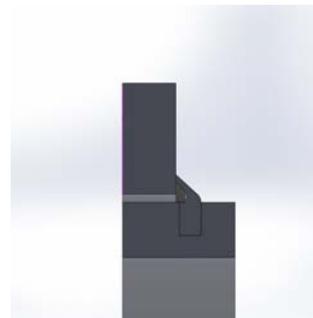

Required Space:

1.5mm x 2.7mm (R2)

2.3mm x 4.0mm (R3)

3.1mm x 5.4mm (R4)

Diameter Range: >200mm

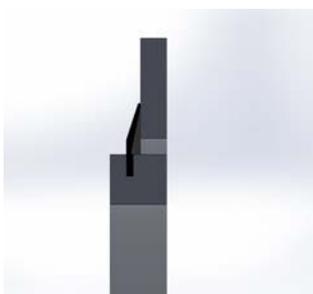

### PROTECTED BEARING GAP SEAL

Low Space Requirement

7mm x 5mm (S7)

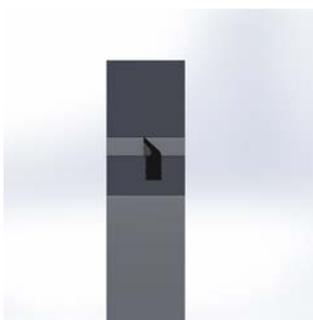

Diameter Range: >200mm

### NORMAL LOW FRICTION SEAL

5mm x 13mm (S4)

Diameter Range: >200mm

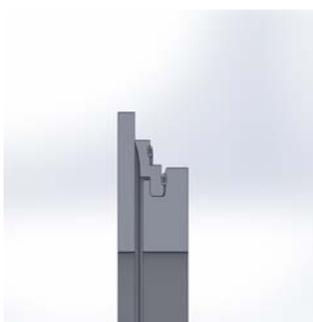

### PROTECTED BEARING GAP SEAL

11mm x 9mm (S5)

Diameter Range: >400mm

Sealing materials are NBR (Nitrile Butane Rubber) as standard. Alternate materials such as Viton, Silicon and Neoprene are available on request. Please call to enquire.

### HIGH PRESSURE GAP SEAL

Double Spring loaded Lip seal

Ideal for Oscillating Loads

9mm x 10mm (S6)

Diameter Range: >200mm

## ***UNASIS Thin Section Ball Bearings***

---

UNASIS thin section bearings are characterised by extremely thin walled bearing races that have split inner race, outer race and cage.

UNASIS thin section bearings are manufactured via a special linear grinding process which simultaneously profiles, hardens and bends the rings without mechanical work. Due to this process the rings remain open or split which allows the use of higher capacity cage strip, opposed to the traditional Conrad method installation and snap over cage. The split design allows the use of a ball cage with a reduced pitch spacing which gives an increased ball compliment. The result is a higher dynamic and static load rating compared to a traditional thin section bearing.

The standard UNASIS range of bearings have rings and balls manufactured from 420C (X46Cr13) Stainless Steel which provides an excellent corrosion resistance capability. The standard cage strip is made from an injection moulded Polyamide-12 polymer which is both lightweight and cost effective. Other cage materials are available on request such as PEEK..

By changing the materials used for the cage and balls UNASIS Thin Section Bearings can be adapted to work in a number of different applications. These include ultra high vacuum, clean room, medical and high temperature.

***Features include:***

***Highly Corrosion Resistant***

***Low Maintenance***

***High Static and Dynamic Load Capacity***

***High Durability***

***High Rigidity***

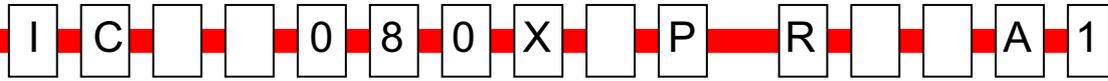

***Low Mass***

***Easy to Install***

***Many Dimensions can be supplied on short lead times.***

## Product Part Numbering System

UNASIS

**SERIES:**

- S 3.175 x 3.175
- U 4.500 x 4.500
- A 6.350 x 6.350

**SPECIAL DESIGNATION**

Customer specific code  
For information contact us

A Axial Bearing

**BALL TYPE**

CB Ceramic Balls

**DIMENSIONAL SERIES:**

Inch Sizes = Bore size in inches x 10

Example: 8 x 10 = 080

Metric Sizes = Bore size in mm

Example: 95mm = 0095

**CAGE COLOUR**

- Preload Red R
- Normal Green No Code
- Clearance Yellow Y

**CONTACT TYPE:**

- X Four Point Contact
- C Radial Contact
- A Angular Contact

**CAGE MATERIAL**

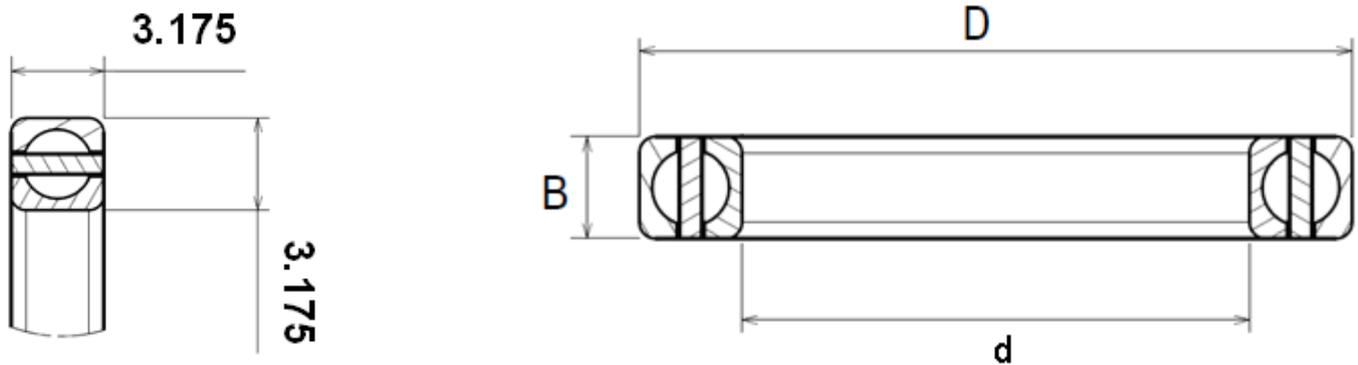

- P PEEK
- V Nylon-66

R = RUNNING CIRCLE DIAMETER

## ***UNASIS Thin Section Roller Bearings***

UNASIS split thin section roller bearings consist of cylindrical rollers arranged to form either a cross roller type or an angular roller type.

The split cross roller bearings see the rollers arranged alternately at 90° angles to each other to produce a four point contact arrangement in a roller bearing. The load is shared across both roller faces to further increase not only capacity but also rigidity within the bearing assembly. The rollers can be alternatively arranged on the same 90° axis to provide an angular contact style roller bearing arrangement.

UNASIS split thin section roller bearings utilise the same split ring design as the ball bearings. This non Conrad assembly method again allows the closer pitch spacing of the rolling elements giving a greater compliment of rollers in this unique bearing shape.

The bearing rings are machined at the ends of the races on both inner and outer ring to provide a profile for the cage to be guided in. The cage is alternately designed to have a T shape at each end which creates a natural labyrinth that seals and protects against the ingress of contamination which could lead to premature bearing failure. It also helps contain the lubrication within the assembly.

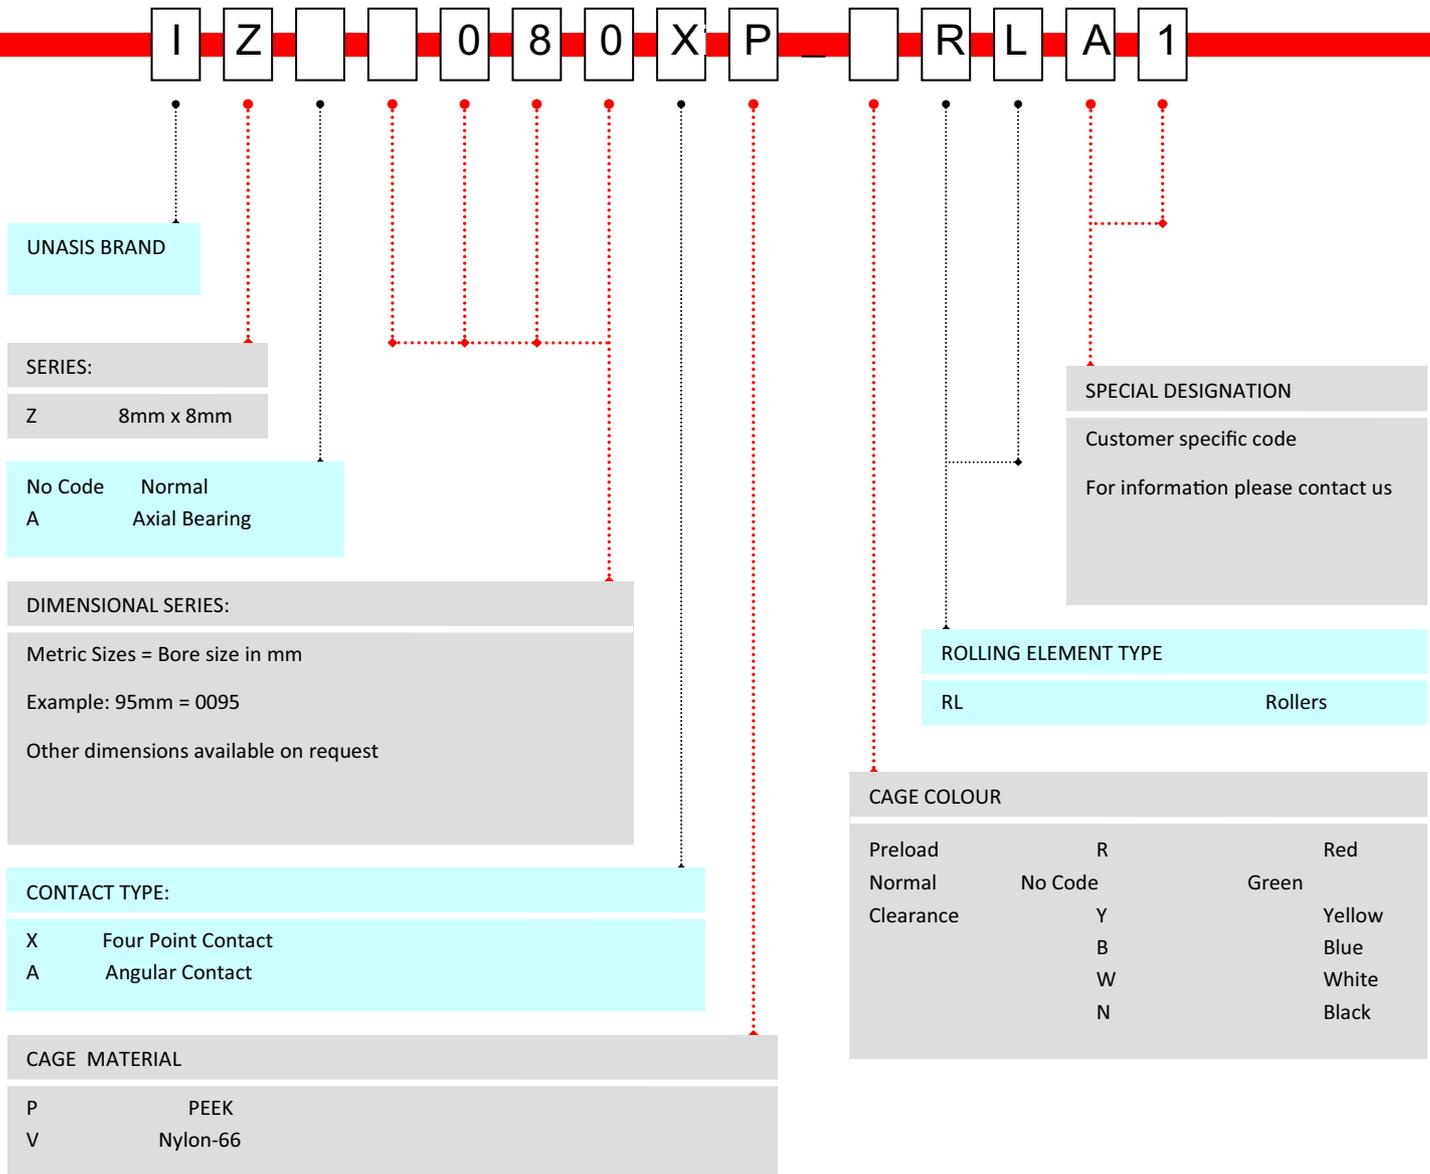

The maximum number of rollers is used in each bearing; therefore the elastic deformation of a cross roller bearing is very small resulting in a very stiff and rigid arrangement once in application. This stiffness can be controlled by roller size selection which would either increase preload or clearance depending on the application requirements.

This versatility means the UNASIS thin section roller bearings can be tailored to each application individually.

## *UNASIS Slewing Bearings*

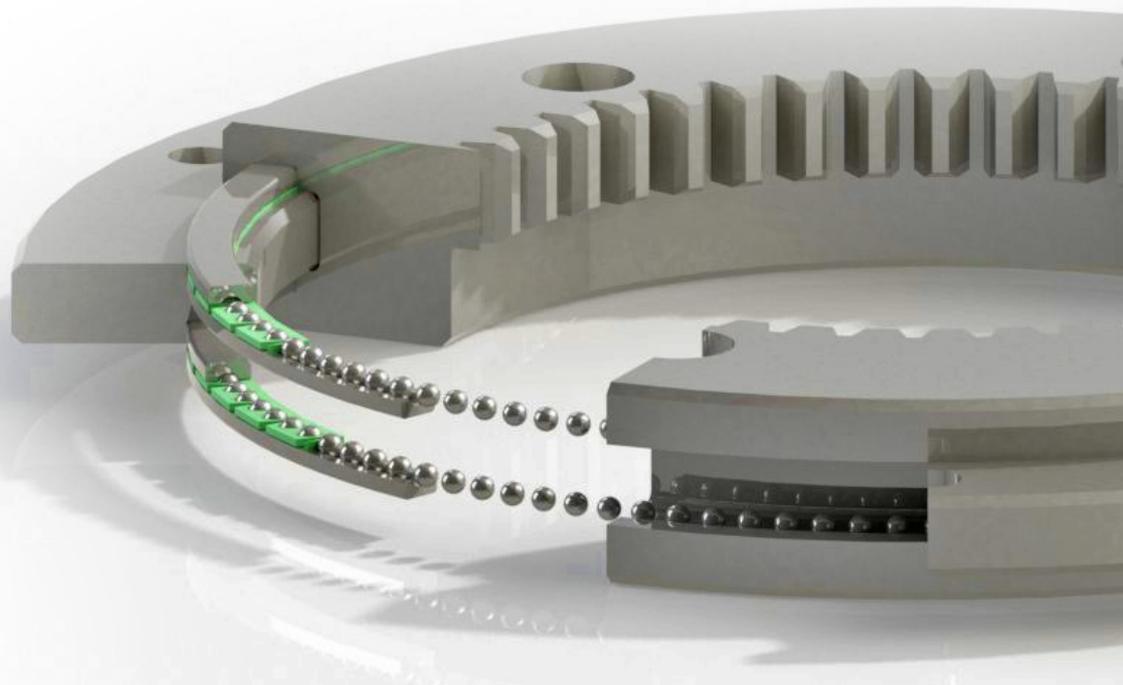

---

Due to the increase in the automated industry there is now a high demand for space-saving and weight saving bearing solutions. The UNASIS thin section bearing ranges help to service this market but in order to further simplify the process we have introduced a range of lightweight, pre-greased, ready to assemble bearing units. Both easy to mount and easy to maintain the IKT and IPT bearings are able to be mounted via inner or outer ring.

Comprising of either two four point contact ball bearings or a single cross roller bearing the IKT and IPT are able to withstand axial loads, radial loads, and moment loads with out issues. UNASIS Slewing bearings are available ungeared, internally geared or externally geared to suit your application.

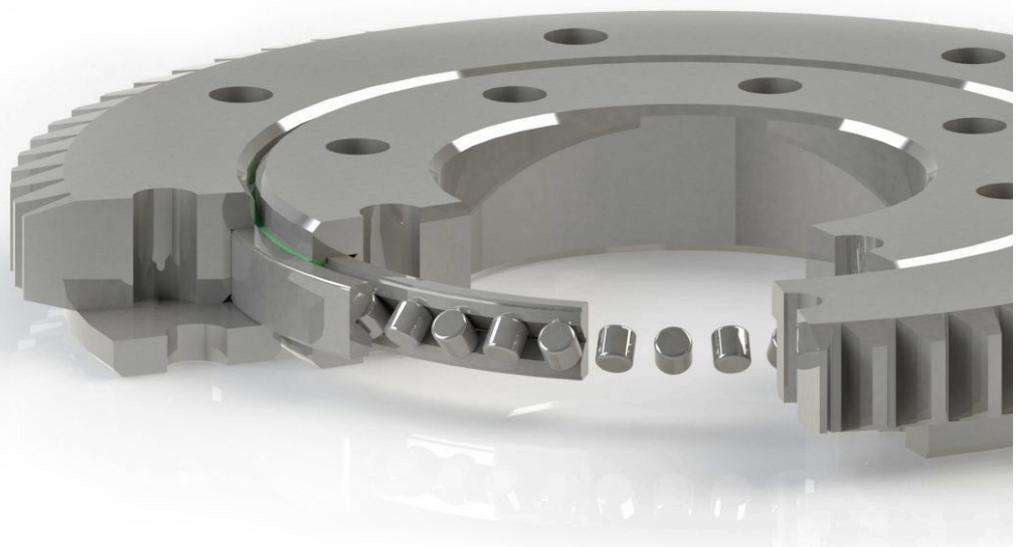

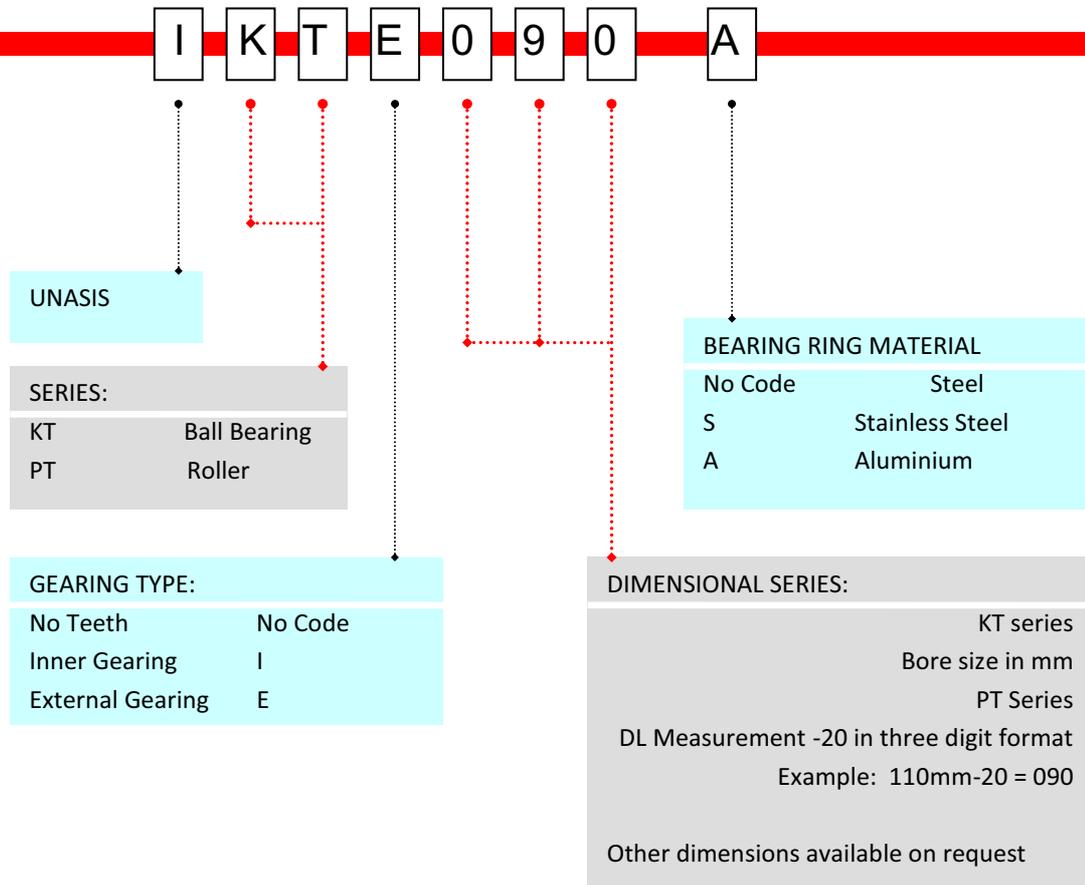

The IKT and IPT housings are available in various materials and gearing arrangements depending on your requirements. They are available in standard Steel, Stainless Steel and Aluminium all of which are available ungeared, internally geared or externally geared to suit your application.

All types of configurations are available on short lead times.
